

Expedited timelines

Improved translation quality

Significant cost saving

Reduce project management

Track project in real time

Automatic Content Fetching

ECI's LPA solution is designed to enable localization managers and their teams to centrally manage, control and monitor fragmented file transfers and high volumes of multilingual translation projects, to ultimately deliver quality translations on time and within budget.

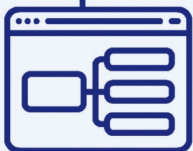

Automatic File Processing

We are able to adapt to every client's chosen file format and conventions. By automatically converting files into a universal format, used by our online translation system, the process of preparing files for translation is simplified.

Automatic Analyzing & Quoting

Our LPA solution enables us to provide you with an immediate quotation, bridging the gap between international office hours. If a fixed rate is quoted, ECI can begin translating your document immediately.

Automatic Linguistic Assignment

ECI's proprietary solution conducts automatic resource allocation based on 120+ linguists' personal attributes, such as academic background, translation experience, nationality and availability. After evaluating these criteria, the best-matched linguist to your specific needs is recommended.

Online Translation & QA System

The online translation system enables translators and PMs to share and maintain TMs. Editors can also utilize our proprietary online QA tools for quality control, greatly improving our overall efficiency, flexibility and translation quality.
